

TYVEK® SHEILDS SHIPMENTS FROM HEAT, COLD & SUN RADIATION DURING TRANSPORTATION

Ideal for shipping of pharmaceutical, fruit, vegetable and floral products, Tyvek® is an exceptional nonwoven material that allows oxygen to reach produce and flowers to guard against irreversible damage and extend product life. Help reduce the total cost and spoilage.

Lightweight Tyvek® Cargo Covers save you money by reducing costs associated with losses, secondary packaging, shipping and excursion management resulting from the fluctuating air temperatures of goods in transit.

Tyvek® covers results in a unique TRIPLE ACTION mechanism:

- 1 The white micro-fibre exterior surface of the covers provides a highly reflective barrier to external solar gain.
- 2 The inner surface presents a 'low-e' emissivity barrier to help maintain core package temperatures.
- 3 Tyvek's inherent vapour permeability controls harmful condensation.

Water resistant

UV-resistant

Lightweight and easy to store

Quick and easy to apply or remove

HDPE, 100% Recyclable

Tyvek® Cargo Covers available in standard Euro, UK/USA Pallet sizes.
